CORPORATE SYSTEMS CENTER

ADM-7

September 9, 1963

Dr. A. W. Wheelon
Central Intelligence Agency
Washington 25, D.C.

Dear Dr. Wheelon:

As you know, in 1961 the United Aircraft Corporate Systems Center was established to provide a corporate instrument for the study and management of complex systems involving the efforts of several divisions of the Corporation. During this spring we moved into a new facility here in Farmington, Connecticut and are in the final process of shaking it down.

We plan to hold a dedication ceremony on October 17 at which Dr. Harold Brown has agreed to deliver an address and we would be extremely pleased if you could be with us at that time. Our present plan calls for brief tours in the late morning to be followed by a simple luncheon and a speaking program ending before 4 o'clock.

In addition to hearing Dr. Brown's remarks, I believe that you will be keenly interested in many aspects of the work that we are doing for the Air Force as integration contractor for the 433L system and, through UTC, on the structural design and subcontract management, with the cooperation of our Sikorsky Division, of the attaching structures for the 120" solid rocket engines to the core of the Titan III space booster. We would like to show you, especially, our stellar inertial guidance system laboratory which we believe to be unique in the world and which makes possible advanced development of integrated guidance and control systems under controlled conditions.

We would be greatly honored by your presence at this important event. I do hope you can be with us.

Sincerely yours,

Charles M. Kearns
